

Get_Predictions.ipynb Usage Guide

1. Data Collection & Consolidation

This section builds the full DE_LU dataset with all time-series data merged and cleaned.

You can change the data collection date range here:

```
start = pd.Timestamp("20250401", tz="Europe/Brussels")  
end = pd.Timestamp("20250427", tz="Europe/Brussels")
```

Final consolidated dataset is saved at:

```
/content/drive/My Drive/Colab  
Notebooks/entsoe_pipeline_optimized123/entsoe_DB_data_DE/DE_LU_c  
onsolidated.csv
```

2. Model Inference & Prediction

This section loads the previously trained AutoGluon models and applies them to the consolidated dataset.

Model folders expected at:

```
/content/drive/My Drive/Colab  
Notebooks/entsoe_pipeline_optimized123/autogluon_models/
```

It runs predictions for:

- *DE Generation Intensity*
 - *DE Consumption Intensity*
 - *All German state-level intensities (if models exist)*
-

The prediction results are saved at:

```
/content/drive/My Drive/Colab  
Notebooks/entsoe_pipeline_optimized123/entsoe_DB_data_DE/Predicted  
_Values_consolidated_DE_LU.csv
```
