

How to Use Main_Pipeline.ipynb

1. Install Required Libraries

Before running the pipeline, install the necessary packages by running the following commands in a Colab cell:

```
pip install entsoe-py  
pip install pyyaml pandas numpy requests "autogluon.tabular"  
scikit-learn
```

2. Mount Google Drive

The pipeline stores all files in Google Drive. Mount your Google Drive at the start of the notebook using:

```
from google.colab import drive  
drive.mount('/content/drive')
```

3. Storage Paths Used

Below are the storage paths used in the pipeline and their purposes:

Path	Purpose
/content/drive/My Drive/Colab Notebooks/entsoe_pipeline_optimized/	Main project directory
entsoe_data_DE.db	SQLite database file
entsoe_DB_data_DE/	Output folder for generated CSV files
autogluon_models/	Folder where trained models are stored
